WAKEFIELD THERMAL SOLUTIONS, INC ANNOUNCES INTERNATIONAL TRAFFIC IN ARMS REGULATIONS (ITAR) CERTIFICATION

Wakefield Thermal Solutions is proud to announce it is now International Traffic in Arms Regulations (ITAR) registered. Wakefield Thermal Solutions has met the requirements for the ITAR registration from the United States Department of State in Washington DC.

Wakefield Thermal Solutions, headquartered in Pelham, New Hampshire, has been a major provider to the Thermal Solutions market since 1957. Wakefield's primary business designs and manufactures standard and customized fabricated heat sinks, which dissipate heat from electronic components. National Northeast, a division of Wakefield, is also an aluminum extruder (35 million pound annual capacity) and fabricator (over 100 CNC machines and 25 punch presses).

In 2008, Wakefield expanded to create an even stronger brand portfolio. Wakefield acquired two additional organizations to enhance and most importantly compliment its already existing manufacturing capabilities by adding Engineered Sintering and Plastics (ESP) of Watertown, CT and Simon Industries of Cary, NC. Both divisions already manufacture products to the military and defense industries. *(Wakefield will only supply parts to other US based companies and is not interested in exporting ITAR components.)*
